

What is claimed is:

1. A pump assembly, comprising:
a base plate;
5 a motor mounted on the base plate and having a drive gear thereon;
a pump plate connected to the base plate and being movable between first and second
positions relative to the base plate;
a first pump mounted on the pump plate and having a gear in mesh with the motor gear
when the pump plate is in the first position; and
10 a second pump mounted on the pump plate and having a gear in mesh with the motor gear
when the pump plate is in the second position.
2. The pump assembly of claim 1 wherein the first pump gear is disengaged from the
motor gear when the pump plate is in the second position and the second pump gear is
15 disengaged from the motor gear when the pump plate is in the first position.
3. The pump assembly of claim 1 wherein the base plate is mountable to a wall so that
the motor is on one side of the wall and the pumps are on the other side of the wall.
- 20 4. The pump assembly of claim 1 wherein the pump plate is detachably mounted to
the base plate.
5. The pump assembly of claim 1 wherein the pump plate includes at least one slot
and the base plate includes a pin extending through the slot to allow movement of the
25 pump plate between the first and second positions.
6. The pump assembly of claim 1 wherein the pump plate is secured in the first and
second positions with a hand actuated knob.

7. A method of changing a pump assembly from a first pump to a second pump, comprising:
mounting the first and second pumps to a pump plate;
mounting the pump plate to a base plate;
5 moving the pump plate to a first position relative to the base plate whereby the first pump is engaged with a drive motor on the base plate; and
moving the pump plate to a second position relative to the base plate whereby the second pump is engaged with the drive motor on the base plate.
- 10 8. The method of claim 7 wherein the first pump is disengaged from the motor when the pump plate is in the second position and the second pump is disengaged from the motor when the pump plate is in the first position.
- 15 9. The method of claim 7 further comprising mounting the base plate to a wall with the motor and pumps being on opposite sides of the wall.
10. The method of claim 7 wherein the pump plate is detachably mounted to the base plate.
- 20 11. The method of claim 7 further comprising securing the pump plate in the first and second positions with at least one hand knob.
12. A pump assembly, comprising:
a motor with a drive gear;
25 first and second pumps having gears at a common end; and
the pumps being simultaneously movable between first and second positions wherein the gear of one of the pumps is engaged with the motor and the gear of the other one of the pumps is disengaged from the motor in each position.
- 30 13. The pump assembly of claim 12 wherein the pumps are mounted on a pump plate which is movable to move the pumps between the first and second positions.

14. The pump assembly of claim 13 wherein the motor is mounted on a base plate and the pump plate is adjustably mounted to the base plate.
- 5 15. The pump assembly of claim 13 further comprising at least one hand-actuated knob to selectively lock the pumps in the first and second positions.
